

## REACH (EG) 1907/2006

„ **R**egistration, **E**valuation and **A**uthorization of **C**hemicals“

### Confirmation

According to REACH, chemical substances must be registered, but the finished product not. As manufacturer and supplier of stamped and tube formed parts from all kind of metals we are not obliged to register our components according to REACH as they are all classified as products.

All raw-materials we use (band/strip, wire and tube), are also classified as products. As „subsequent applier“, we are not obligated to examine the correct registration of these materials by our suppliers.

Chemicals which are used in our cleaning and galvanic process will be registered by our suppliers if a registration is mandatory. All necessary material safety data sheets (MSDS) will be checked on a regular basis, updated and archived.

OSTERRATH supervises this directive regarding topicality and will investigate in the event of amendments. This acknowledgement has been based on the actual laws and regulations and in accordance to our best knowledge and awareness.

We hereby confirm, that our products do **not** contain any of the 73 chemical substances (ECHA release of 19.12.2011) of very high concern which are indicated in the amended „candidate list of authorization SVHC“ in a percentage above 0,1%. This confirmation fulfils our duty of information in accordance to article 33.

Bad Laasphe, 2012-01-04
